GLORIA EASY Pin - simple and smart design which reduces damage and saves lives!

Obvious problems require a non-standard approach. This is the GLORIA EASY Pin - so simple that it's hard to believe that it wasn't invented earlier.

GLORIA EASY Pin - smart and incredibly simple idea, universal use and clear operation.

GLORIA EASY Pin - smart design saving lives!

GLORIA EASY Pin solves the well-known problem when the unexperienced user squeezes the fire extinguisher's handles and therefore can't remove the safety pin.

The double "nip effect" that burdens the pin means that it simply cannot be removed.

Areas of use:

6 l / 6 kg / 9 l / 9 kg / 12 kg GLORIA squeeze grip fire extinguishers.

By installing GLORIA EASY Pin the problem of unexperienced user squeezing the fire extinguisher's handles is eliminated, the customer can remove the safety pin faster and easier in an emergency and thus be able to use the fire extinguisher, which reduces damage and saves lives.

Unique patented design makes it suitable for the vast majority of GLORIA squeeze grip fire extinguishers.

The "leverage effect" multiplies force used when removing the safety-pin.

Pin's smart design allows it to be used on both sides of the fire extinguishers handle.

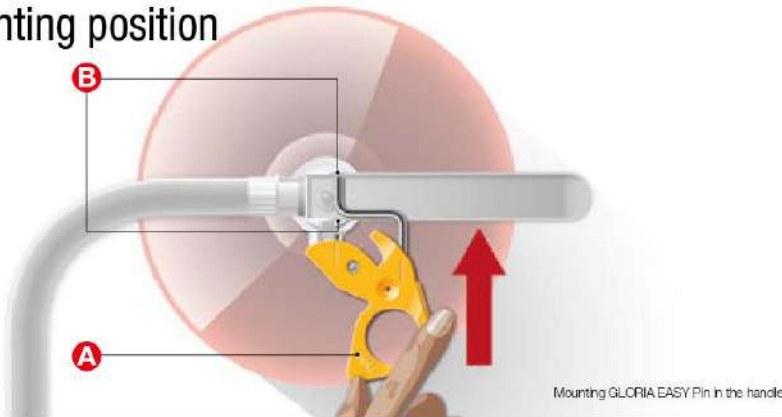

Metal pin made of stainless steel and sturdy UV-resistant plastic casing.

Due to the size and vivid colour it is easy to spot and grip the pin (even in the gloved hand).

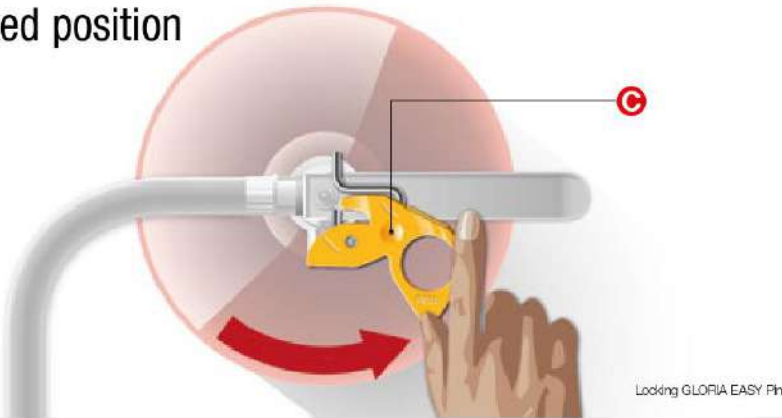

EASY Pin

accessories

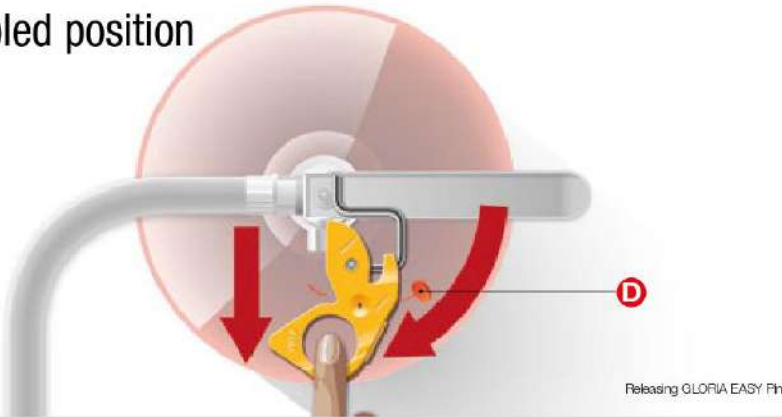

1. Mounting position

2. Locked position

3. Enabled position

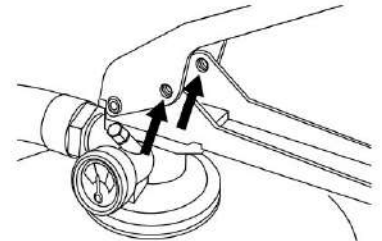

GLORIA EASY Pin has three different modes

1. **Mounting position** - when mounting GLORIA EASY Pin.
2. **Locked position** - when the GLORIA EASY Pin is locked onto the extinguisher and can be sealed.
3. **Enabled position** - when the tamper seal is broken and GLORIA EASY Pin removed from the handle.

GLORIA EASY Pin montage / release instruction

1. Put the **GLORIA EASY Pin A** in the **mounting position (1)**.
2. Place pin ends in the **holes B** for safety-pin and press straight in - both pin ends should pass through both holes at the same time (see picture below).

Turn counter-clockwise, at about 45°, to **locked position (2)** - pin is locked.

3. Put a tamper seal into designated **hole C**.
4. In an emergency - pull the pin straight out and change GLORIA EASY Pin to an **enabled position (3)**. Thanks to „leverage effect” force used is multiplied, **tamper seal D** is broken, fire extinguisher is ready to action.
